RESOLVE STAIRS & TRANSITIONS

HOW A STAIR NOSE WORKS

Side view, 2 steps shown

Each tread gets a full plank, glued down (not floating). The stair nose finishes the front edge, since a plain plank has no finished edge to step on safely.

Number of steps

count

Average tread depth (front to back)

inches

Average tread width (side to side)

inches

Open on one or both sides? (needs stair return)

circle: neither / one / both

Landing size, if any (top or bottom)

feet x feet

Install method — ask Liz which fits your stairs:

- **Overlap** — Easiest, lowest profile rise, good for most DIY installs
- **Lock-down** — Mechanically secured, very stable, moderate skill
- **Flush mount** — Sits level with the plank, most polished look, most involved install

Send this worksheet to Liz for help finding exactly what you need
